

# Complex CRD Resolved

## Cyprotylogrin

Broad-Spectrum Combination of Cyprofloxacin and Tylosin Antibiotics

# Cyprotylogrin

Broad-Spectrum Combination of Cyprofloxacin and Tylosin Antibiotics

## Indications

Cyprotylogrin is well-prevention to carry out preventive action at an early age, namely in the first 3-5 days of age. it can be used for treatment of CRD, Salmonellosis, Cholera, Coryza, and Staphylococcosis. It can be given 3 days consecutively before the vaccination.

## Benefits

The unique combination of Cyprofloxacin which is a quinolone group that works to inhibit bacterial DNA gyrase and tylosin which is a group of macrolides that work to be bound to the 50 S ribosome subunit so that it will inhibit the translocation of peptidyl tRNA needed for protein synthesis. The advantages of the combination are:

- Broad-spectrum that can kill Gram-Positive, Gram Negative and Mycoplasma bacteria.
- Ability to reach the digestive tract even though the water sacs have no blood vessels,
- Immunomodulatory effect that it can increase the body's antibody production

## Composition

Each kg contains:

Cyprofloxacin	100 g
Tylosin Tartrate	100 g

## Administration

1 g/2 L of drinking water or 100 mg/kg of Body Weight for 3-5 days consecutively

## Packing Size

- 100 kg
- 1 kg
- 10 kg @100g
- 20 kg @100g
- 50 kg @100g
